Rule 13p-1 under the Securities Exchange Act (17 CFR 240.13p-1) for the reporting period from January 1 to December 31, 2014.

Item 1.01 Conflict Minerals Disclosure and Report*Conflict Minerals Disclosure*

Powell Industries, Inc. (the "Company") undertook a country of origin inquiry with respect to the conflict minerals used in the production of the Company's custom engineered-to-order electrical equipment and has determined in good faith that for the year ended December 31, 2014:

- a) The Company has manufactured or contracted to manufacture products as to which certain conflict minerals, gold, tin, tungsten and tantalum (collectively, 3TG), are necessary to the functionality or production of such products.
- b) Based on a reasonable country of origin inquiry, the Company believes, or has reason to believe, that a portion of its products that contain the necessary 3TG originated, or may have originated, in the Democratic Republic of the Congo or an adjoining country and knows, or has reason to believe, that those necessary 3TG products may not be from recycle or scrap sources.

A copy of the Company's Conflict Minerals Report is filed as Exhibit 1.01 hereto and is publicly available at the Company's website at www.powellind.com, under the section entitled "Investors."

Item 1.02 Exhibit

<u>Exhibit No.</u>	<u>Description</u>
Exhibit 1.01	Conflict Minerals Report for the calendar year ended December 31, 2014

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the Company has duly caused this report to be signed on its behalf by the duly authorized undersigned.

POWELL INDUSTRIES, INC.

Date: June 1, 2015

By: /s/ DON R. MADISON

Don R. Madison

Executive Vice President

Chief Financial and Administrative Officer

(Principal Financial Officer)

**Conflict Minerals Report
For the Year Ended December 31, 2014**

This is the Conflict Minerals Report (this Report) of Powell Industries, Inc. (Powell, the Company, we, us or our) for calendar year 2014 in accordance with Rule 13p-1 under the Securities Exchange Act of 1934, as amended (the Exchange Act). Please refer to Section 13(p) of the Exchange Act and the general instructions to the Specialized Disclosure Report on Form SD for definitions of certain terms used in this Report, unless otherwise defined herein.

We are in the business of developing, designing, manufacturing and servicing custom engineered-to-order equipment and systems for the management and control of electrical energy. Certain conflict minerals (as defined in Item 1.01(d)(3) of Form SD), specifically gold, tin, tungsten and tantalum (collectively, 3TG) are used in the production of our custom engineered-to-order equipment. Accordingly, pursuant to the rules promulgated by the Securities and Exchange Commission, we conducted a reasonable country of origin inquiry (RCOI) regarding such conflict minerals designed to determine whether any of such conflict minerals originated in the Democratic Republic of the Congo (DRC) or an adjoining country (collectively, Covered Countries), or are from recycled or scrap sources.

In conducting the RCOI, Powell engaged Assent Compliance (Assent) to assist with the effectiveness of our conflict minerals program. We identified the scope of our inquiry by first completing a supplier list extraction from our preferred vendor list. This list was then filtered to remove service providers, indirect materials suppliers and inactive suppliers (minimum of one year since last purchase)

This was intended to ensure that all suppliers surveyed provided items to Powell that were used in final products in the year 2014. Once the filtering was completed, we populated the list with contact information and this list, composed of 4,767 suppliers, was then provided to Assent for upload to their Assent Compliance Manager software system (Assent Compliance Manager).

Assent conducted additional analysis of the supply chain that, combined with supplier feedback, resulted in 3,063 suppliers being removed from the scope of the conflict minerals inquiry. The factors considered in Assent's secondary analysis and the information provided that removed these suppliers from the scope of inquiry included:

- Whether the product they supplied was merely packaging. (labels do not count as packaging);
- Whether the parts a supplier used did not end up in the final product. (such as equipment used to make the product, i.e. industrial equipment, computers etc.);
- Whether a supplier used test labs to test, for example, the resistance or durability of a product;
- Whether a supplier was just a service provider;
- Whether a supplier supplied anything to Powell in the last 2 years.

After limiting the scope of inquiry, Assent conducted the supplier survey portion of the RCOI. The supplier survey utilized a template developed by the Electronic Industry Citizenship Coalition® and The Global e-Sustainability Initiative (EICC/GeSI) called the Conflict Mineral Report Template (CMRT). The CMRT was developed to facilitate general disclosures and information regarding smelters that provide materials to the supplier. It includes questions regarding the supplier's conflict-free minerals policy, the engagement process with its direct suppliers and identification of the smelters used by the supplier.

Non-responsive suppliers were contacted a minimum of three times by the Assent Compliance Manager and then were also managed by the Assent Compliance Supply Chain team in one on one communications. This included two to three follow ups from the supply chain team. After three months of non-responsiveness, suppliers were then contacted via email and phone by Powell procurement team members as an escalation to encourage their response to Assent.

Assent communications include training and education on the completion of the CMRT form as well as access to a Supplier Resource Center designed to alleviate any remaining confusion with suppliers. All communications were monitored and tracked in Assent's system for future reporting and transparency.

All submitted forms are accepted and classified as valid or invalid so that data is still retained. Suppliers are contacted in regards to invalid forms and are encouraged to resubmit a valid form. As of March 3, 2015, there were no invalid supplier submissions.

Additionally, based on the smelter lists provided, we are aware that there are certified conflict free smelters that source from the Covered Countries in our supply chain. Many suppliers are still unable to provide all the smelters or refiners used for materials supplied to us. Furthermore, some responses indicated an "unknown" status with respect to the origin of 3TG.

After completing the RCOI, we then implemented due diligence measures on the source and chain of custody of such conflict minerals conforming to the Organisation for Economic Co-operation and Development (OECD) Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas, including the related supplements on gold, tin, tantalum and tungsten (OECD Guidance), an internationally recognized due diligence framework.

A. Establish Strong Powell Management Systems

In accordance with our due diligence framework and compliance efforts:

- We have communicated to all of our applicable suppliers our efforts to comply with Section 1502 of the Dodd-Frank Wall Street Reform and Consumer Protection Act, pursuant to a compliance statement and other communications (collectively, the Compliance Statement). We requested that our applicable suppliers provide a comprehensive conflict minerals declaration for all conflict minerals in the form of the CMRT. We provide our Compliance Statement to all new suppliers and plan to provide annual related compliance statement communications to our entire supply base.
- We implemented internal compliance efforts, including internal reporting requirements, to support our supply chain due diligence process.
- We implemented a risk mitigation response plan to address business relationships with suppliers that are DRC conflict undeterminable (as defined in Item 1.01(d)(5) of Form SD), which mitigation may include identifying an alternate supply. Our program includes continuous monitoring to adjust our strategies as sourcing data improves and new information is received.

Powell has adopted a company policy with respect to conflict minerals which is posted on our website at www.powellind.com.

Internal Team

Powell has established a management system for conflict minerals. Our management system is sponsored by the Chief Financial Officer as well as executive-level representatives and a team of subject matter experts from relevant functions such as:

Tim Irons – Strategic Sourcing Manager
Steve Williams – Senior Legal Counsel
Milburn Honeycutt – Corporate Controller
Dennis Thonsgard – VP of Research and Product Development
Larry Larsen – Risk Management Director
Dawn Ramos – Commodity Manager
Griselda Perez – Supply Chain Administrator

The team of subject matter experts is responsible for implementing our conflict minerals compliance strategy and is led by the Commodity Manager who acts as the executive conflict minerals program manager. Senior management is briefed about the results of our due diligence efforts on a regular basis.

Control Systems

Controls include, but are not limited to, our code of conduct which outlines expected behaviors for all Powell employees and a conflict minerals policy which can be found on our website at www.powellind.com.

We rely on our direct suppliers to provide information on the origin of the 3TG contained in components and materials supplied to us – including sources of 3TG that are supplied to them from lower tier suppliers. Contracts with our suppliers are frequently in force for three to five years or more and we cannot unilaterally impose new contract terms and flow-down requirements. As we enter into new contracts, or our contracts renew, we are adding a clause to require suppliers to provide information about the source of 3TG and smelters. It will take a number of years to ensure that all our supplier contracts contain appropriate flow-down clauses. In the meantime, as described below, we are working with selected suppliers to ensure they provide the 3TG sourcing information until the contracts can be amended.

With respect to the OECD requirement to strengthen engagement with suppliers, we have, through Assent, provided education on the conflict minerals regulation. We have leveraged the existing communications within the company, specifically the procurement department, to encourage supplier interactions with Assent as well as to help suppliers understand the requirement for completion of their supplier surveys. Feedback from this engagement has allowed us to enhance the training and focus and adapt it to each user's needs. It has also allowed for our supplier communications to be more focused and ensure expectations are clear.

We have multiple longstanding grievance mechanisms whereby employees and suppliers can report violations of Powell's policies.

We have also adopted a policy to retain relevant documentation. Documentation will be retained for minimum of five years.

B. Identify and Assess Risks in Our Supply Chain

We identified risks at the product level by determining first whether the products contained conflict minerals necessary to the functionality or production of products that we manufacture or contract to be manufactured.

We then identified the applicable supplier(s) relating to those products. As we progress, we expect that transparency in our supply chain will increase and that will allow for better risk assessment at more detailed levels of our supply chain. We intend to continue communicating with our suppliers regarding conflict minerals. We want to help mitigate risks that the necessary conflict minerals identified in the products we manufacture, or contract to manufacture, could benefit armed groups in the Covered Countries.

Based on assessed risks, our RCOI covered applicable suppliers.

C. Design and Implement a Strategy to Respond to Identified Risks

We believe that our RCOI was reasonably designed and executed to determine the existence and source of conflict minerals in our supply chain, including from recycled or scrap sources (as defined in Item 1.01(d)(6) of Form SD). We utilized the EICC/GeSI's CMRT template for our RCOI and comparable forms of documentation accepted in the industry. We conducted our effort to send surveys in good faith, utilizing up to three rounds of communications with our suppliers through March 2015. We evaluated survey responses to identify: (i) the use and source of conflict minerals; and (ii) any warning signs indicating that conflict minerals may have come from the a Covered Country. We made additional inquiries on a case-by-case basis to clarify or obtain more information as necessary. We tracked results of our supply chain diligence process and periodically reported the results to our executive leadership team.

We do not have sufficient information, based on the survey responses received, to determine each of the specific facilities used to process conflict minerals or to identify specific countries of origin for the conflict minerals used in all of our products (whether manufactured or contracted to be manufactured by us).

D. Implement Targeted Independent Third-Party Due Diligence

We support industry associations that administer independent third-party smelter and refinery audit programs. We encourage targeted suppliers and/or facilities to participate in comparable due diligence validation activities.

We engaged Assent to assist in the RCOI, data collection and survey process.

E. Report on Supply Chain Due Diligence

We developed a supply chain due diligence policy, communicated this policy to our suppliers and will continue to communicate with our suppliers. We also developed and distributed our Compliance Statement. Further, we have responded to various customer requests for information regarding our conflict minerals determination.

Due Diligence Process

Following our RCOI, we conducted a due diligence review of the source and chain of custody of the 3TG contained in covered products. Our due diligence measures were designed to conform in all material respects with the framework in the OECD Guidance.

Certain of the responses to the surveys included the names of facilities listed by the suppliers as smelters or refiners. We do not typically have a direct relationship with 3TG smelters and refiners and do not perform or direct audits of these entities within our supply chain. We and our consultant compared these facilities listed in the responses to the list of smelters maintained by the Conflict-Free Sourcing Initiative (CFSI), the United States Department of Commerce (DoC) and the London Bullion Market Association (LBMA) and, if a supplier indicated that the facility was certified as "Conflict-Free," we confirmed that the name was listed by CFSI. As of March 3rd, 2015, we have validated 298 smelters or refiners and are working to validate an additional 1,810 smelter/refiner entries from the submitted CMRTs. We have included the current list of valid smelters disclosed to us by our suppliers which is attached as Appendix I.

In accordance with OECD Guidance, it is important to understand risk levels associated with conflict minerals in the supply chain. Smelters not being certified DRC-Conflict Free pose a significant risk to the supply chain. In the Assent Compliance Manager, risk is classified as High, Medium and Low; this Risk rating is generated based on 3 scoring criteria:

- 1) **Regulated Body:** this assesses whether the smelter is a member and has an associated regulated body number (Smelter CID Number is the primary method).
- 2) **Proximity: Level 1 Country:** Countries with known active ore production for tin or tantalum that are not identified as conflict regions or plausible countries that smuggle or export materials containing tin or tantalum. Examples include countries located in North or South

America, Australia or Europe that are G8 Level Countries who are known to meet OECD standards in other sectors. Level 2 Country: Known or plausible countries that smuggle or export materials containing tin or tantalum out of Level 3 countries, or that have transit of materials containing tin or tantalum. This currently includes Kenya, Mozambique, and South Africa. Level 3 Country: The DRC and its nine adjoining countries as outlined in Section 1502 of the Dodd Frank Act. These include Angola, Burundi, Central African Republic, DRC, Rwanda, South Sudan, Tanzania, Uganda and Zambia.

- 3) Likelihood: We also calculate supplier risk based on the chances that the supplier provides 3TG that may originate from Non-Conflict Free sources. The value of this risk is calculated based on the risk ratings of the smelters declared by that supplier on their CMRT.

Additionally, suppliers are evaluated on program strength (further assisting in identifying risk in the supply chain). At this stage in conflict minerals compliance it is well-known that many companies are in the middle of the process and do not have many answers beyond “unknown”. The criteria used to evaluate the strength of the program are:

- A. Do you have a policy in place that includes DRC conflict-free sourcing?
- E. Have you implemented due diligence measures for conflict-free sourcing?
- H. Do you verify due diligence information received from your suppliers?
- I. Does your verification process include corrective action management?

When suppliers meet or exceed those criteria (Yes to at least A,E,H,I) they are deemed to have a strong program. When suppliers do not meet those criteria, they are deemed to have a weak program.

We believe that the inquiries and investigations described above represent a reasonable effort to determine the mines or locations of origin of the 3TG in our applicable products, including (1) seeking information about 3TG smelters and refiners in our supply chain by requesting that our suppliers complete the CMRT, (2) verifying those smelters and refiners with the expanding CFSI lists, (3) conducting the due diligence review and (4) obtaining additional documentation and verification, as applicable. Our existing policy related to relevant documentation of our conflict mineral compliance process requires that documentation will be retained for a period of at least five years.

While due diligence is ongoing and the information received continues to improve in quantity and quality, the majority of the responses received continue to provide data at a company or divisional level or did not specify the smelters or refiners used for materials supplied to us. We have decided to disclose validated smelters provided to us by our supply chain. However we cannot definitively determine whether any of the 3TG reported by the suppliers were contained in materials supplied to us or to validate that any of these smelters or refiners are actually in our supply chain. As a result, we are unable to identify all smelters and refiners as well as all the countries of origin of the 3TG that are contained in the applicable products
